

Amendments to the Specification

Please add the following new paragraphs after the paragraph beginning at page 7, line 9:

FIG. 6 is a view of an embodiment of the window system where the spare tire gate is open.

FIG. 6A is a view of an embodiment of the window system showing the bottom side of the insertable screen pinched between the spare tire gate and the back gate of the vehicle.

Please replace the paragraph beginning at page 9, line 7 with the following amended paragraph:

Not all sides of the insertable screen need be matingly coupled. As previously described, the bottom side of the back window on Chrysler Corporation's Original Equipment Manufactured (OEM) soft-covering system for the convertible motor vehicle sold under the trademark JEEP® can be matingly coupled by using magnetic strips on the bottom side of the back window and matingly coupling the bottom side to the back gate of the vehicle. Alternatively, the bottom side 41 of the back window 40 can also be secured by pinching the bottom side 41 between the spare tire gate 43 and the back gate 42 when closing the spare tire gate 43, as seen in **Figs. 6 and 6A**.
